YESTERDAY’S HIGHLIGHTS

Descending aortic aneurysm repair: Is EVAR better than conventional replacement?

Joseph E Bavaria
Hospital of the University of Pennsylvania, USA

Thoracic endovascular aortic repair (TEVAR) has evolved over the past 15 years from hand- sewn experimental devices to become the predominant technique for repair of most thoracic aortic pathologies. We began the TEVAR program at the University of Pennsylvania in 1999, initially treating patients enrolled in pivotal trials with aortic/atrio-aneurysm and occa-

Continued on page 2

Please see page 2 for further details.

Monday morning sessions 19
Exhibitors 20
Floor plan 21
Things to do and see in Vienna 22,24
Forthcoming Events 26
Product listings 26

Sunday 18 October

EACTS Daily News

The official newspaper of the European Association for the Cardio-Thoracic Surgery Annual Meeting 2009

Thursday 15 October

In this issue...

3D echo and mitral valve prolapse
Nikolay V Vorobyov reported on the repair of mitral valve prolapse in the beating heart.

Different options for the mitral valve
Michele De Bonis and Jeremy Seckinger discuss the surgical and interventional approaches for the mitral valve.

Future perspectives in cardiac assist devices
Harry Bennetts shares his thoughts on current and future VADs.

Thoracic EVAR
After a decade of TEVAR, Martin Czemy asks what lessons have been learned.

Cardiac surgery and the elderly
Leslie Hamilton and Philipp Koh discuss the implications and results of cardiac surgery in the elderly population.
